```

1	in them, and the libraries are implementations of those	
2	APIs.	
3	Q. When you worked at Google on the Android team	
4	and as the head of core libraries, did you ever refer to	
5	those implementations of the Java and javax APIs as	09:50:17
6	interoperability libraries?	
7	MR. PURCELL: Object to the form.	
8	THE WITNESS: I don't recall. It's quite	
9	possible.	
10	Q. BY MR. PETERS: Did anyone else at Google	09:50:36
11	refer to those as implementations of the Java and javax	
12	APIs as the interoperability libraries?	
13	MR. PURCELL: Object to the form.	
14	THE WITNESS: I don't recall the exact terms.	
15	Q. BY MR. PETERS: But in your 2008	09:50:49
16	self-evaluation, you refer to them as the Java-ish	
17	libraries; correct?	
18	MR. PURCELL: Object to the form.	
19	THE WITNESS: Correct.	
20	Q. BY MR. PETERS: When you wrote that you build	09:51:02
21	heavily on the Harmony class library, what were you	
22	referring to?	
23	A. So Harmony is an Apache Project. They're	
24	creating a free and their goal was to create a free	
25	Open Source implementation of the Java libraries under	09:51:24
		Page 12

the Apache license. The Apache license enables you to use that source code pretty much however you wish. It's very permissive compared to a license like the GPL, which has considerably more restrictions. For example, you have to Open Source any changes that you make.  So the Harmony libraries were an independently created and Apache-licensed implementation of the Java APIs, the Java SE APIs.  Q. You also wrote that you'd much rather be designing APIs than reimplementing them.  Do you see that? What what APIs have you designed when at Google?  A. Oh, lots of them. For example, I implemented Google created Google Guice, which is a dependency injection framework, and that actually inspired and Google drawwork, and that actually inspired and turned into JSR 330, which is dependency injection for Java, which is I led that JSR which contributed those APIs to the Java platform. And it was actually the fastest executing JSR in the history of the JCP.  Beyond that, I also contributed to the Google collections now called Guava, which is a set of collections implemented in the Java programming language, can be run on Java like and for that, you know, I implemented several of those, like a class called MapMaker and various things like that.  O9:53:23 Page 13			
very permissive compared to a license like the GPL, which has considerably more restrictions. For example, you have to Open Source any changes that you make.  So the Harmony libraries were an independently created and Apache-licensed implementation of the Java APIs, the Java SE APIs.  Q. You also wrote that you'd much rather be designing APIs than reimplementing them.  Do you see that? What what APIs have you designed when at Google?  A. Oh, lots of them. For example, I implemented Google created Google Guice, which is a dependency injection framework, and that actually inspired and o9:52:29 turned into JSR 330, which is dependency injection for Java, which is I led that JSR which contributed those APIs to the Java platform. And it was actually the fastest executing JSR in the history of the JCP.  Beyond that, I also contributed to the Google Collections now called Guava, which is a set of collections implemented in the Java programming language, can be run on Java like and for that, you know, I implemented several of those, like a class called MapMaker and various things like that.  09:53:23	1	the Apache license. The Apache license enables you to	
has considerably more restrictions. For example, you have to Open Source any changes that you make. MapMaker and various things like that. 09:53:23	23	can be run on Java like and for that, you know, I	
	24	implemented several of those, like a class called	
Page 13	25	MapMaker and various things like that.	09:53:23
			Page 13

1	There are several other ones, but I don't	
2	know how much detail you want me to go into.	
3	Q. Would you say that designing APIs is a	
4	creative activity?	
5	MR. PURCELL: Object to the form.	09:53:36
6	THE WITNESS: Yes, absolutely.	
7	Q. BY MR. PETERS: When you are referring to	
8	reimplementing them, are you referring to the work that	
9	you did with Noser to implement core libraries according	
10	to Java APIs?	09:53:57
11	A. I am.	
12	Q. If I can ask you to turn to the second page	
13	of your self-evaluation.	
14	A. Yes.	
15	Q. In the fourth paragraph there, you have a	09:54:10
16	description that begins: "Most recently I set my sights	
17	on our class preloading code."	
18	Do you see that?	
19	A. Yes.	
20	Q. All right. With your work on the class	09:54:29
21	preloading code, was it the case before your work that	
22	the list of classes that would be preloaded by Android	
23	would be manually managed?	
24	A. Yes, that was the case.	
25	Q. And you wrote that you added hooks to Dalvik	09:54:53
		Page 14

1	so we can record class load and initialization times.	
2	Can you describe generally what that work	
3	involved?	
4	A. Yes. So I mean, basically as you would	
5	execute apps, it would performance profile class loading,	09:55:12
6	and it would like time both the loading of a class, which	
7	just means really like loading an executable code. And	
8	it would also independently measure the initialization	
9	time of the class. So when you initialize a class, it	
10	runs some kind of code.	09:55:34
11	And then it would so it would record that	
12	information, and then I wrote another tool that would	
13	I mean, this was quite a bit of information. It would	
14	mine all of this information that was gathered from	
15	running popular apps and there's dozens of apps and	09:55:52
16	it would mine that information and prioritize and figure	
17	out which were the most important classes to preload and	,
18	have like hot and ready to go into memory. So classes	
19	that were already loaded whenever an app started.	
20	Q. So the ultimate output of your tool would be	09:56:22
21	a list of classes and that should be preloaded and the	
22	order in which they should be preloaded?	
23	A. Correct.	
24	MR. PURCELL: Object to the form.	
25	Q. BY MR. PETERS: And your tool calculated the	09:56:41
		Page 15

1	does or	
2	Q. Yes.	
3	A the implementation of it?	
4	I don't have a deep understanding. I know	
5	it's a so there's different types of just-in-time	11:29:37
6	compilers. So, for example, some like, Sun's VM,	
7	like, compile individual methods. Dalvik is different in	
8	that it uses what we call a trace-based JIT, which means	
9	it doesn't care about the structure. It optimizes things	
10	at a lower level, like the actual extremes of code. And	11:30:02
11	this is more comparable to all the stuff that Bill had	
12	done previously and also comparable to stuff that like	
13	I forget what you call it SpiderMonkey or something,	
14	on Mozilla Mozilla's jump strips, just-in-time	1
15	compiler.	11:30:20
16	Q. So so on a trace-based JIT, it could	
17	compile part of a method instead of doing things on an	
18	entire method base?	
19	A. Yeah. A code that crosses multiple methods.	
20	It doesn't really care about methods. It cares about	11:30:33
21	what code is being actually executed. It's, like, a	
22	level down.	
23	Q. As you did your work to re-implement the Java	
24	APIs for Android	
25	A. Uh-huh.	11:30:52
aco.		Page 63

1	Q did you do anything to investigate whether	
2	your work would infringe any of Sun's intellectual	
3	property?	
4	MR. PURCELL: Object to the form.	
5	THE WITNESS: I didn't know that there was	11:31:04
6	any. So I wouldn't have done that work. I mean, I	
7	didn't read the source code, for example.	
8	Q. BY MR. PETERS: How did how did	
9	you know that the Android code correctly implemented the	
10	Java APIs?	11:31:34
11	A. There were a number of ways. We read the	
12	specification, and like it describes, the span of the	
13	implementations. And wrote tests for that specification.	
14	And we took Open Source projects and ran their test	
15	suites on top of the Android. And that caught a lot of	11:31:53
16	issues.	
17	And then also, people would file bugs when	
18	they tried to run their Java code, like previously	
19	existing Java code, on Android. And we would address	
20	those issues.	11:32:10
21	Q. BY MR. PETERS: So how did the Open Source	
22	tests manage to test for correct behavior? Were they	
23	written to the spec as well?	
24	A. Well	
25	MR. PURCELL: Object to the form.	11:32:30
		Page 64

1	Go ahead.	
2	THE WITNESS: So the Open Source tests, I	
3	mean, they use the Java programming language and the Java	TO A
4	APIs. And they exercise in various ways. I mean,	
5	especially, like, when you have big Open Source projects.	11:32:40
6	And if those tests did not pass on Android, that would	
7	indicate that there was something that we didn't support.	
8	Q. BY MR. PETERS: For the it's the it's	
9	the API specification that defines the function and	
10	behaviors that the API is implementation source	11:33:01
11	performs; is that correct?	
12	MR. PURCELL: Object to the form.	
13	THE WITNESS: The API specification defines	
14	the function, yes.	
15	Q. BY MR. PETERS: I guess what I'm really	11:33:14
16	getting at is, you know, you you know, Google was	
17	developing an implementation of a Java API.	
18	A. Uh-huh.	
19	Q. And in order to know whether it behaves	
20	correctly, it would have to know what the behavior is	11:33:32
21	supposed to be; isn't that right?	i
22	A. Yes.	,
23	Q. And the description of the behavior is in the	
24	API specification.	
25	A. Right. The Java docs, yes. Uh-huh.	11:33:42
		Page 65

			***
1		Q. Did you consult the Java docs when doing your	
2	work on	the API implementations for Android?	
3		A. Yes.	
4		Q. Okay. And where did you obtain those Java	
5	docs?		11:33:59
6		A. They're posted for free on Sun's website.	
7		Q. Okay. So you consulted Sun's website for the	
8	API spec	cifications when doing the work for Google?	
9		A. Yes.	
10		Q. Who else did?	11:34:09
11		A. I'm not sure.	
12		Q. Did the Noser team consult Sun's	
13	specific	cation?	
14		MR. PURCELL: Object to the form.	
15		THE WITNESS: I would I don't have any	11:34:20
16	specific	c knowledge of it, but I would assume so.	
17	٠	Q. BY MR. PETERS: Did you observe any copyright	
18	notices	on the specifications?	
19		A. Yes.	
20		Q. And what did the copyright notices on Sun's	11:34:35
21	API spec	cifications say?	
22		A. I didn't I don't recall.	
23		Q. Did you consult with an attorney about	
24	impleme	nting Sun's Java APIs?	
25		MR. PURCELL: You can answer that question	11:34:57
			Page 66

1	"yes" or "no".	
2	THE WITNESS: No.	
3	Q. BY MR. PETERS: Why not?	
4	A. I didn't see a need to. I mean, it wasn't	
5	copying the Java docs.	11:35:10
6	Q. Before the first commercial release of	
7	Android in a mobile device, do you know if anyone at	
8	Google consulted with an attorney regarding the Java API	
9	implementations in Android?	
10	A. I don't have knowledge of that.	11:35:26
11	Q. Do you know if anyone at Google investigated	
12	Sun's patent portfolio before the first commercial	
13	release of Android in a mobile device?	
14	A. No.	
15	Q. Did you have discussions on the Android team	11:35:43
16	about Sun's intellectual property rights?	
17	A. No.	
18	Q. Earlier today you mentioned that	
19	Dan Bornstein had been working on the Java API	
20	implementations before you joined up.	11:36:21
21	A. Correct.	
22	Q. What resources did Mr. Bornstein do in his	
23	work on the Java API implementations?	
24	MR. PURCELL: Object to the form.	
25	THE WITNESS: Actually, I do want to go back	11:36:33
		Page 67

1	in to your previous question. I mean, you mentioned	
2	intellectual property. So obviously the trademark is	
3	intellectual property. I knew that yeah, I did	
4	discuss getting that Java stamp of approval.	
5	Q. BY MR. PETERS: So those were discussions	11:36:49
6	about not being able to call things Java, because they	
7	had not passed the TCKs; is that right?	
8	A. Correct. Yeah.	
9	Q. What resources did Mr. Bornstein use in his	
10	work on implementing the Java API specifications?	11:37:01
11	MR. PURCELL: Object to the form.	
12	THE WITNESS: I'm not sure.	
13	Q. BY MR. PETERS: Did Mr. Bornstein consult	
14	Javadoc, to your knowledge?	
15	MR. PURCELL: Object to the form.	11:37:16
16	THE WITNESS: I'm not sure.	
17	Q. BY MR. PETERS: You had turn back to	
18	Apache and Apache Harmony for a minute.	
19	A. To what? I'm sorry.	
20	Q. To Apache Harmony. Not any specific	11:37:49
21	document.	
22	A. Oh, okay.	
23	Q. But you had mentioned that Sun was putting on	
24	a field of use trying to put on field of use	
25	restrictions onto Apache that would prevent the use of	11:38:05

4	I, LESLIE ROCKWOOD, CSR No. 3462, do hereby
5	certify:
6	That the foregoing deposition testimony was
7	taken before me at the time and place therein set forth
8	and at which time the witness was administered the oath;
9	That testimony of the witness and all
10	objections made by counsel at the time of the examination
11	were recorded stenographically by me, and were thereafter
12	transcribed under my direction and supervision, and that
13	the foregoing pages contain a full, true and accurate
14	record of all proceedings and testimony to the best of my
15	skill and ability.
16	I further certify that I am neither counsel
17	for any party to said action, nor am I related to any
18	party to said action, nor am I in any way interested in
19	the outcome thereof.
20	IN WITNESS WHEREOF, I have subscribed my name
21	this 4th day of August, 2011.
22
